Caries

Caries-risk assessment models currently involve a combination of factors including diet, fluoride exposure, a susceptible host, and microflora that interplay with a variety of social, cultural, and behavioral factors.3-6 Caries

risk assessment is the determination of the likelihood of the incidence of caries

Pediatric Dental Care: Prevention ...

The caries balance concept (FIGURE 1) states that the progression or reversal of dental caries is determined by the balance between pathological factors and caries protective factors. 30–33 A risk assessment categorization of low, moderate, or high is based on a preponderance of the factors circled as “Yes” on the caries risk assessment ...
